

I urge the FCC to reject NAB's petition 04-160. Offering local traffic and weather is a valuable service that simply isn't being done as effectively via local stations. Also, satellite radio provides programming that you can't find anywhere else. Banning this type of service would be like telling The Weather Channel that it can't broadcast our local weather 24x7 because there is a local station that does it for a few minutes a day. Thank you for your attention to this matter.
